Background

- Preservation of serviceable hearing (Gardner-Robertson Scales I & II) is a major concern the stere otactic radios urgery of Vestibular schwannomas
- Factors affecting hearing preservation are
 - volume of intracanalicular part of tumor,
 - dose heterogeniety of intracanalicular part of tumor
 - distance of tumor from cochlea
 - mean and maximum doses to cochlea

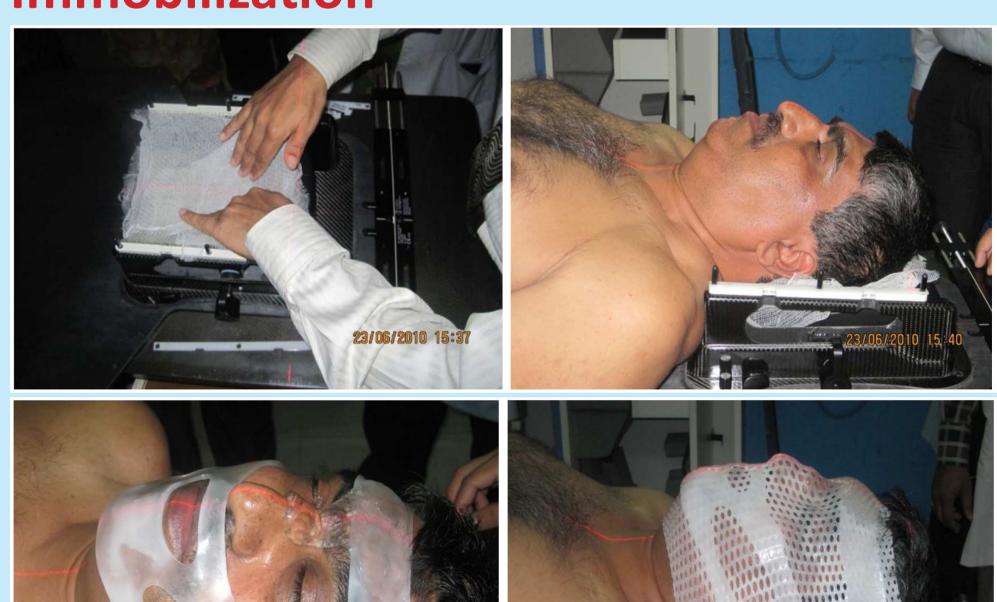

Objective

To compare the treatment plans using conventional stereotactic conformal beams and intensity modulated beams with inverse planning software on BrainLab, iPlan planning system for the stereotactic radiosurgery treatment of vestibular schwannomas

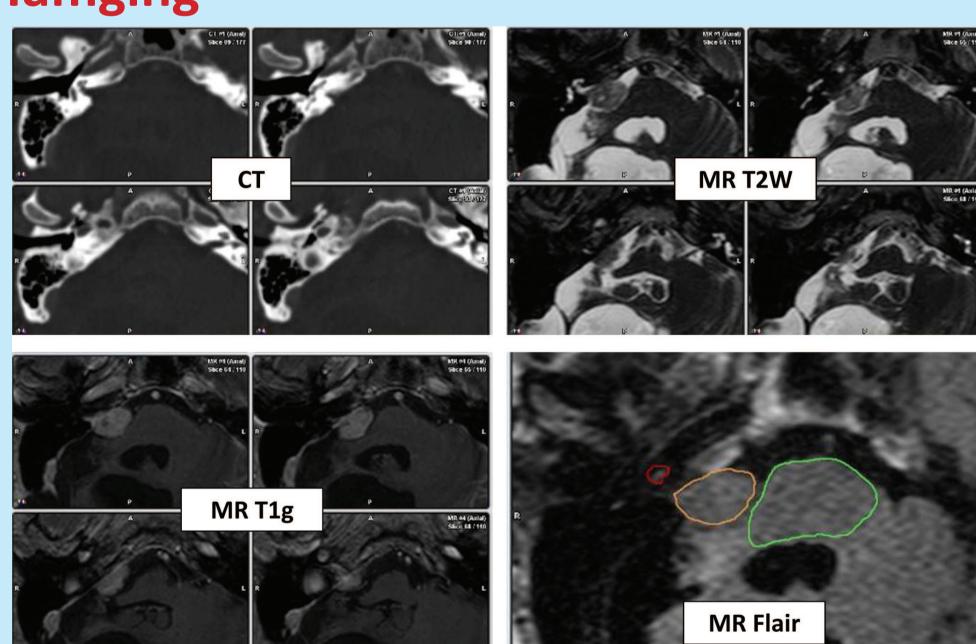

Patient Characteristics

Translational Deviations (mm)				
Sr No	Gardner-Robertson Hearing Level (Grade)	Volume (cc)	Prescribed Dose in Single fraction SRS	
Case 1	III	2.158	12 Gy	
Case 2	II	0.344	12 Gy	
Case 3	IV	1.768	13 Gy	
Case 4	III	3.916	12 Gy	
Case 5	III	3.115	12 Gy	

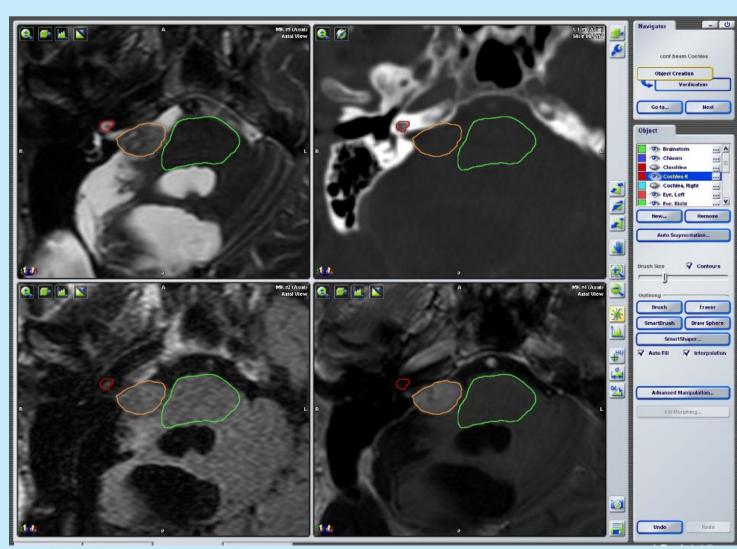

Immobilization

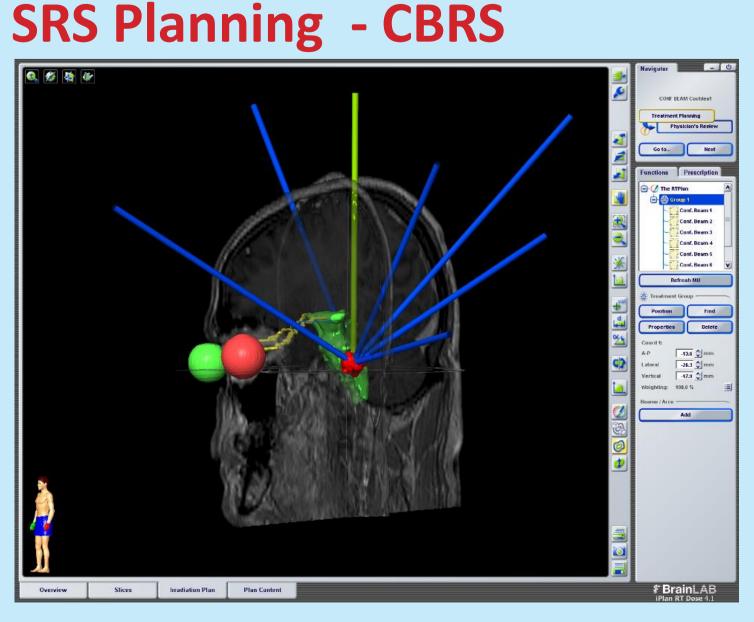

lamging

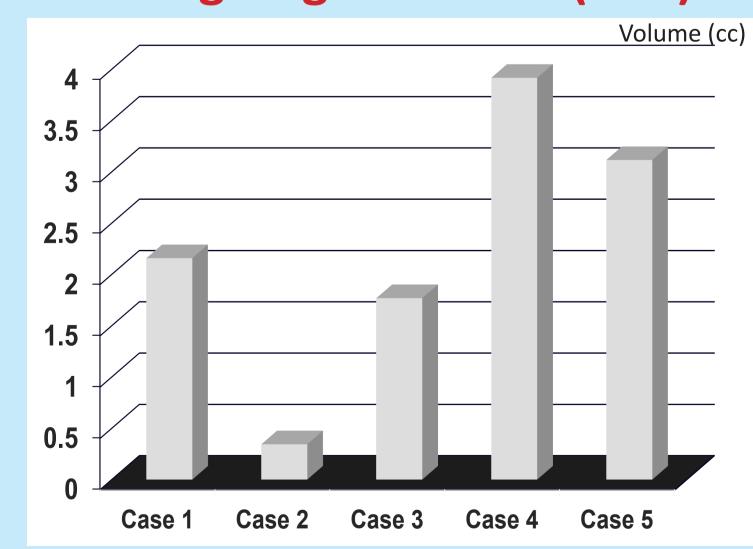

Volume Delineation

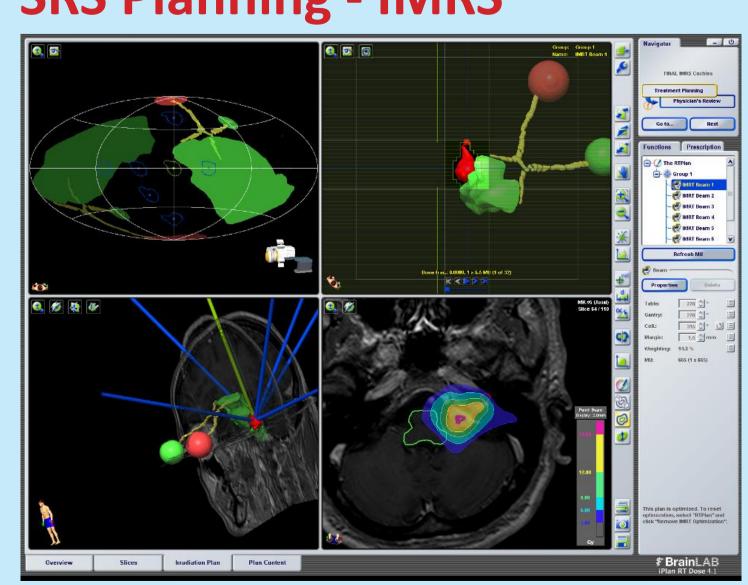

Planning target volume (PTV)

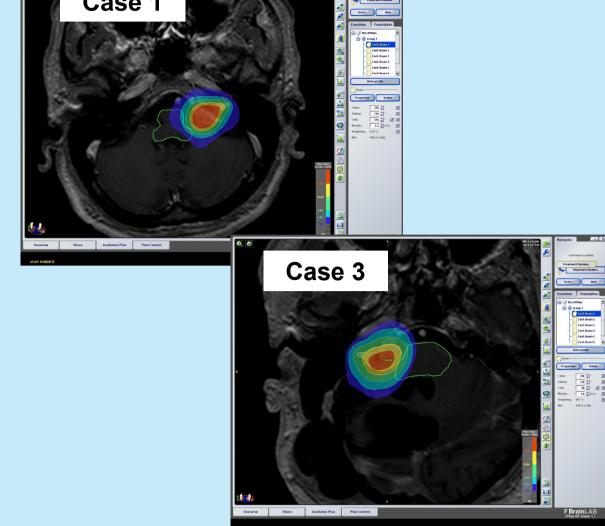

SRS Planning - IMRS

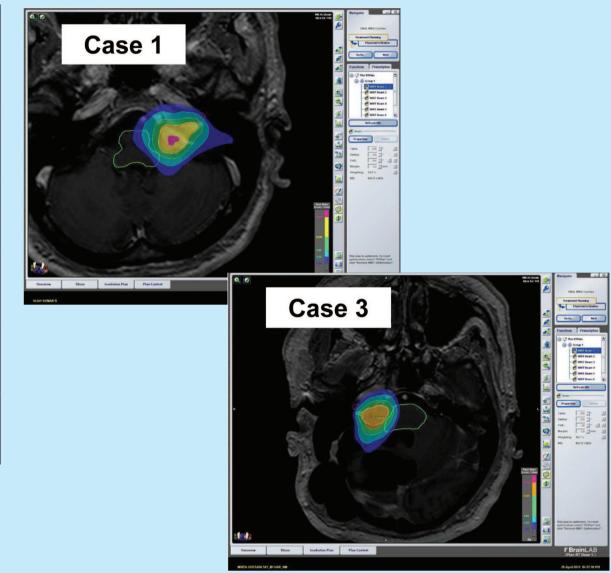

CBRS Plan – PTV coverage

Sr No	Prescribed Dose (Gy)	Iso-dose (%)	Dose (max)	Dose (mean)	Conformity Index	
Case 1	12	80	16.01	14.89	2.48	
Case 2	12	90	14.17	13.27	2.01	
Case 3	13	90	15.34	14.39	1.51	
Case 4	12	90	14.3	13.31	1.55	
Case 5	12	85	15.41	14	2.4	

IMRS Plan – PTV coverage

Sr No	Prescribed Dose (Gy)	Iso-dose (%)	Dose (max)	Dose (mean)	Conformity Index
Case 1	12	90	13.75	13.23	1.03
Case 2	12	95	12.7	12.48	1.3
Case 3	13	95	14.75	13.96	1.4
Case 4	12	90	14.29	13.52	1.3
Case 5	12	93	14.31	12.94	1.38

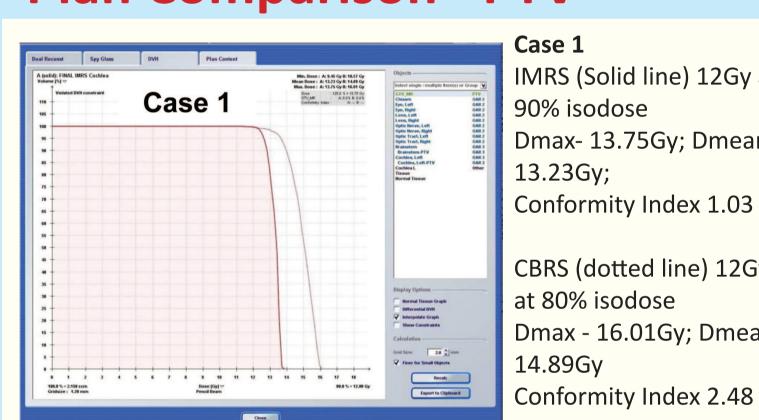

CBRS Plan – Organs at Risk

Sr No	Cochlea (Dose max) Gy	Cochlea (Dose mean) Gy	Brainstem (Dose max) Gy	Brainstem (Dose mean) Gy
Case 1	10.97	5.6	6.43	2.32
Case 2	11.5	9.46	1	0.24
Case 3	10.64	6.63	8	2.02
Case 4	10.75	9.11	8.55	2.2
Case 5	13.95	12.25	8.5	1.62

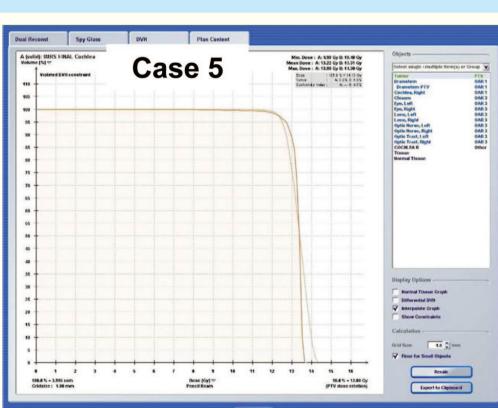

IMRS Plan - Organs at Risk

	igails at Misk			
Sr No	Cochlea (Dose max) Gy	Cochlea (Dose mean) Gy	Brainstem (Dose max) Gy	Brainstem (Dose mean) Gy
Case 1	10.74	5.6	5.48	1.65
Case 2	12	9.94	1	0.24
Case 3	5.78	3.31	7.5	1.94
Case 4	7.6	3.97	7	1.7
Case 5	12.72	10.95	8	1.6

Plan Comparison - PTV

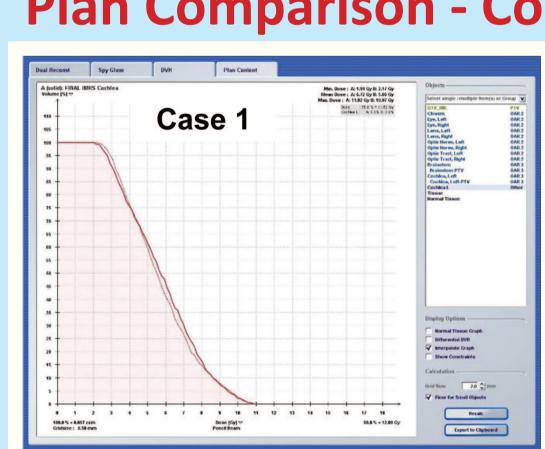

Case 1 IMRS (Solid line) 12Gy at 90% isodose Dmax- 13.75Gy; Dmean 13.23Gy; Conformity Index 1.03 CBRS (dotted line) 12Gy at 80% isodose Dmax - 16.01Gy; Dmean -14.89Gy

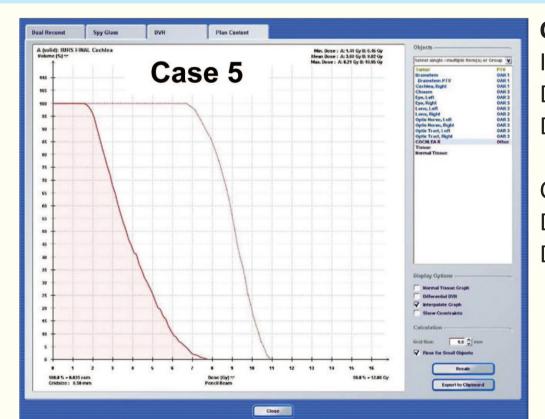

Case 5 IMRS (Solid line) 12Gy at 93% isodose Dmax- 14.31Gy; Dmean - 12.94Gy; Conformity Index 1.38

CBRS (dotted line) 12Gy at 85% isodose Dmax - 15.41Gy; Dmean – 14.Gy Conformity Index 2.4

Plan Comparison - Cochlea

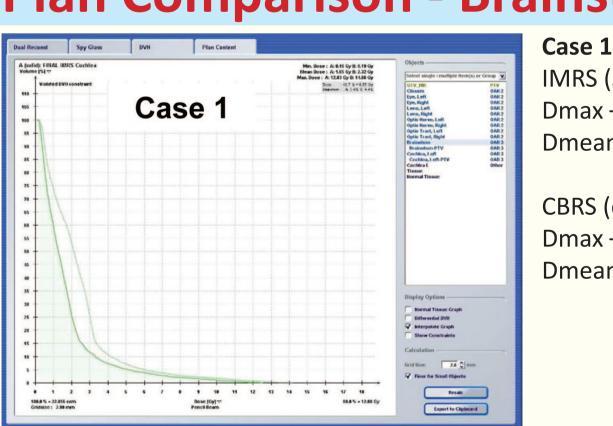

IMRS (Solid line) Dmax – 10.74Gy Dmean – 5.6Gy CBRS (dotted line) Dmax – 10.97Gy Dmean – 5.6Gy

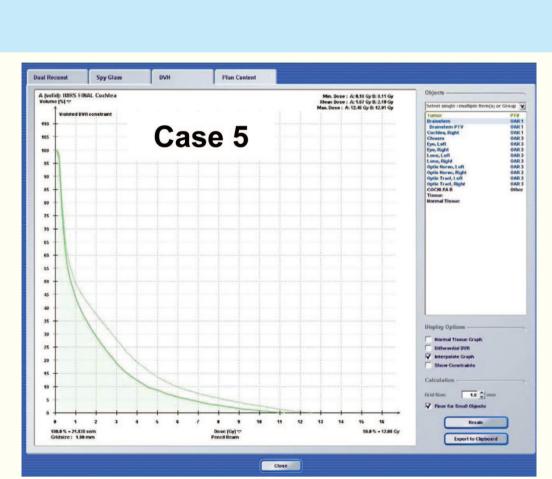

Case 5 IMRS (Solid line) Dmax – 12.72Gy Dmean - 10.95Gy CBRS (dotted line) Dmax – 13.95Gy Dmean – 12.25Gy

Plan Comparison - Brainstem

IMRS (Solid line) Dmax - 5.48Gy Dmean 1.65Gy CBRS (dotted line) Dmax – 6.43Gy Dmean – 2.32Gy

Case 5 IMRS (Solid line) Dmax – 8Gy Dmean – 1.6Gy CBRS (dotted line) Dmax – 8.5Gy Dmean – 1.62Gy

Plan Comparison - Over all

Plan Comparison – Over all						
	Dose description (5 cases)	CBRS Plan	IMRS Plan			
PTV						
	Mean of Dose max. (Gy)	15.04	13.96			
	Mean of Dose mean (Gy)	13.97	13.22			
	Mean Conf. Index	1.99	1.28			
Cochlea						
	Mean of Dose max. (Gy)	12	9.76			
	Mean of Dose mean (Gy)		6.75			
Brainstem						
	Mean of Dose max. (Gy)	6.35	5.79			
	Mean of Dose mean (Gy)	1.73	1.42			

CONCLUSIONS

- Intensity modulated radiosurgery plans were better as compared to conformal beam radiosurgery plans in terms of homogeneity and conformity of the prescribed dose to PTV.
- There was improvement in doses to normal structures such as brainstem and cochlea.
